

Sasquatch Math Stories

by division 5 (grades 2&3), Grauer Elementary

One day a Sasquatch got 500 salmon from the ocean. He ate 250 salmon. How many salmon are left?

The Sasquatch was hungry and she walks to the forest to get some mushrooms. There were 555 mushrooms and the Sasquatch ate 212 mushrooms. And her child ate 50 mushrooms. How many mushrooms are left?

Once upon a time there was a Sasquatch. That Sasquatch was 9 feet tall. He lived alone in a cave. One day a fire came. The Sasquatch has 205 baskets of water and he used 100 baskets of water. How many baskets of water does he have left? One day the Sasquatch went to the river. The Sasquatch caught 20 fish and he ate 15 fish. How many fish are left?

The Sasquatch needs 56 mushrooms, but one cedar basket only holds 8 mushrooms. So how many baskets does the Sasquatch need?! What do you think?

One day the Sasquatch had 26 fish that he saved. He had 92 berries that he saved. One night he went hunting for salmon and he found 30 fish. How many pieces of food does he have altogether?

Once there was a Sasquatch in the forest and he went to the sea to catch 157 fish and he got 53 mushrooms, and he ate 53 fish and 14 mushrooms. How many pieces of food does he have left?

Once upon a time a Sasquatch was roaming the forest. He caught 92 fish, 55 mushrooms and 66 insects. He ate 14 of each and then spit out 8 things. How many things does he still have left to eat? (not the spit out things)

Once upon a time there was a Sasquatch that was 9 feet tall and her parents went to the river to eat fish. She went to the river to eat fish too! She caught 88 fish and ate 34 fish. How many did she have left? Then the Sasquatch made 83 cedar baskets and filled 63 baskets with water. How many baskets were not filled with water? The Sasquatch went to find mushrooms to eat. The Sasquatch picked 74 but gave 10 to her mother and 10 to her father and ate the rest. How many mushrooms did the Sasquatch eat?

The Sasquatch grew up to 60-70 feet tall. How tall are two Sasquatches who are sixty feet tall and stand on top of each other? (see picture)

One time 15 Sasquatches were in a cave. Nine went out to the washroom. How many were in the cave now?

Once there was a Sasquatch in the forest. He got 29 fish and 33 mushrooms. He gave 26 mushrooms and 25 fish away. How many fish and mushrooms did he have left to eat?

One day there was a Sasquatch in a forest. He had 10 000 fish. He ate 1796 fish. How many fish did he have left? The Sasquatch then had a nap. He slept for 10 days. Then he woke up for 9 days. Then he fell back asleep for 96 hours. How many days did he sleep for?

The Sasquatch got 45 fish and then 40 fish. How many fish did the Sasquatch get? The Sasquatch found a lady Sasquatch and then a baby Sasquatch. The mom Sasquatch made cedar baskets and they put all the cedar baskets beside the trees so they can get water.

One day there was a Sasquatch that was promised 12 561 years and 213 days to live but 10 356 year and 111 days were taken away from him. How many years and days does he have to live?

Once there was a Sasquatch that was 9 feet tall. One day the Sasquatch is very hungry. So the Sasquatch wants to catch some fish. The Sasquatch needs 35 fish for his family and 30 fish for herself. How many fish does the Sasquatch need altogether?

One day there was a Sasquatch that was lost in the forest. 10 days later he ate 20 000 000 000 fish but spit out 1000 fish. How many fish did he really eat?

The cedar tree is 30 metres tall. Every year it grows 2 metres taller. 8.5 years later – how tall is it? Every year it leans 0.5 percent to the right and now it is leaning at 5 percent already. In two years, how much will it be leaning?
